

BIOMEX

We serve different

Your specialist for biological and clinical raw materials for more than 25 years

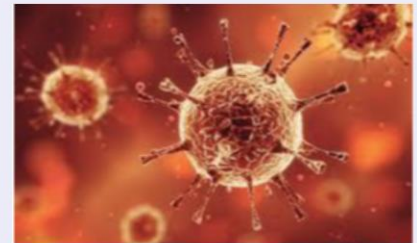

First of all: We hope you, your teams and families are all in good health.

To face the COVID-19 pandemic, Biomex has wasted no time and has fully focused its activities on assisting the IvD industry. With **the following SARS-CoV-2 products** we try to help our customers in their development & production of the urgently needed assays. Please contact us for more information by email: order@biomex.de or directly by phone: +49 6221 894 669 80.

product #1

SARS-CoV-2 NAT Validation Panel: It consists of 20 characterized patient swabs diluted in Viral Transport Media, including the ct values.

product #2

Sero Conversion Panels: For the development of immunoassays these panels are essential to determine the appropriate cut-off. We are currently collecting longitudinal bleeds from 5 individuals, just released from COVID-19 quarantine. Plasma from the first 4 members has already been collected. Unfortunately, due to the lack of available tests, we don't provide any titer data at the moment but deliver the freshly collected bleeds on a weekly basis.

product #3

Patient Samples: We hold over 200 IgG/IgM samples of 5-10 mL each from different individuals. For larger demands of patient samples please contact us directly.

product #4

Positive Controls: For the production of controls & calibrators Biomex has started to collect citrate plasma from the first recovered COVID-19 patients right after their quarantine. Our inventory already holds over 100 Anti-SARS-CoV-2 IgM and IgG positive plasma units.

Our entire team is here to assist you.
